3 ABSTRACT OF DISCLOSURE  
4

5 A dental hygiene device comprises a cup member including an  
6 attachment member that enables the device to be attached and  
7 detached to a suction tube adapted to be inserted into the mouth of a  
8 patient during polishing of the patient's teeth. The cup member holds  
9 a tooth polishing material that is accessed by a dental hygienist during  
10 polishing of a patient's teeth.
